On Windows, macOS, and Linux, it is best to install Miniconda for the local user, which does not require administrator permissions and is the most robust type of installation. Step 8 — Setting Up Anaconda Environments You can create Anaconda environments with the conda create command. For example, a Python 3 environment named my_env can be created with the following command: `conda create --name my_env python=3` Activate the new environment like so: Your command prompt prefix will change to reflect that you are in an active Anaconda environment, and you are now ready to begin work on a project. System architecture: Windows- 64-bit x86, 32-bit x86; macOS- 64-bit x86 & Apple M1 (ARM64); Linux- 64-bit x86, 64-bit aarch64 (AWS Graviton2 / ARM64), 64-bit IBM Power8/Power9, s390x (Linux on IBM Z & LinuxONE). So for instance, the behavior of: `$ conda create -n myenv python` will be to install Python 2.7 with the Python 2 Miniconda and to install Python 3.8 with the Python 3 Miniconda. OutputAnaconda3 will now be installed into this location: /home/sammy/anaconda3 - Press ENTER to confirm the location - Press CTRL-C to abort the installation - Or specify a different location below [/home/sammy/anaconda3] >>> At this point, the installation will proceed. The linux-aarch64 Miniconda installer requires glibc >=2.26 and thus will not work with CentOS 7, Ubuntu 16.04, or Debian 9 ("stretch"). However, if you need to, you can install Miniconda system wide, which does require administrator permissions. Do you wish the installer to initialize Anaconda3 by running conda init? The other difference is that the Python 3 version of Miniconda will default to Python 3 when creating new environments and building packages. Once Miniconda is installed, you can use the conda command to install any other packages and create environments, etc. Step 6 — Activating Installation You can now activate the installation with the following command: Step 7 — Testing Installation Use the conda command to test the installation and activation: You'll receive output of all the packages you have available through the Anaconda installation.
